NOTIFICATION SERVICE DOCUMENTATION

Description

This is a specification document defining how to build an API that can receive notifications concerning an inflow into an Account on Bankone and card transactions by MFBs customer. Such an API will be notified for funds flowing in through NIBSS as well as through Quickteller platforms and debit transactions initiated via customer's card.

Requirements

The third party is required to provide an access key that would be embedded in the request header sent to the web service provided.

Endpoint Specification

Parameter	Format
Amount	Transaction amount in kobo
